### *Multi-modal Knowledge Distillation with LLM for Molecule Property Prediction*

- Explored the impact of **multi-modal** inputs, including textual descriptions, diagrams, node features, and graph structures, on molecule property prediction, and assessed the LLM's capability to capture multi-modal information.
- **Fine-tuned** language models to enhance the encoding of LLM outputs, and **augmented the input space** for superior representation learning performance.
- Implemented **knowledge distillation** from Large Language Models by aligning their outputs with smaller models, like GNNs and MLPs, boosting **efficiency** and reducing **costs** during reasoning.

### *Heterophily-aware GNNs and Trustworthy GNNs*

- Developed Graph Memory networks to tackle heterophily in graphs, enhancing prediction with local and global pattern learning, and introduced regularization for improved global information capture, achieving top performance.
- Investigated the impact of filter frequency in **Spectral GNNs**, using theoretical and empirical analyses.
- Introduced shape-aware regularization and a Newton Interpolation-based spectral filter in GNN, customizing filters to match homophily levels and enhancing performance on various datasets.
- Surveyed trustworthy graph neural networks to improve **privacy, robustness, fairness, and explainability**.
